(a.) Demographics

(a-1.) High-Income and Youthful Demographic in Midtown:

Midtown Manhattan is characterized by a diverse and affluent population, reflecting its status as a major commercial hub. The estimated income distribution reveals that a substantial 50% of residents earn \$100,000 or more, indicating a concentration of high-income professionals in finance and consulting. The marital status shows a predominance of single individuals (55%), highlighting the area's appeal to young professionals focused on career advancement.

Educational levels are notably high, with 85% having college experience, which reflects the demand for skilled labor in Midtown's competitive job market.

Age distribution indicates a youthful demographic: 55% are aged 25-44, and only 10% are 65 or older. These trends suggest a vibrant, dynamic community that attracts and retains professionals seeking career opportunities in an urban environment. Overall, Midtown Manhattan exemplifies a thriving, educated, and predominantly single population.

(Figure 2- Annual Median Income)

(Figure 3- Education Level)

(Figure 4- Marital Status)

(a-2.) Marital Status in Midtown Manhattan: Predominantly Single Population:

The chart highlights the marital status distribution in Midtown Manhattan, showing that a significant portion of the population is single, with a notable presence of married individuals. Divorced and widowed individuals make up a smaller share of the demographic. This suggests that the area is particularly attractive to young professionals and those focused on career advancement.

(b.) Challenge

(b-1.) Atypical Column Spans Affecting Apartment and Hotel Layouts

The Chrysler Building's 17-18.5 ft column spans, narrower than the standard 20 ft in residential buildings, present challenges in converting it into apartments or hotel rooms. This configuration limits room placement, requiring larger unit sizes (e.g., 550-850 sqft for one-bedroom units) to fit within the structural bays.

(b-2.) Exterior Wall to Core Distance Challenges in Chrysler Building Residential Conversion

The 95-foot distance from the exterior wall to the core complicates the conversion of the Chrysler Building into residential or hotel spaces. Our solution is to introduce a skylight and create an atrium space, maximizing natural light and making the expansive layout more suitable for functional and appealing living areas.

(Figure 5- Ref:Lafayette Park, Detroit MI)

(c.) Case Study

(c-1.) Lafayette Park, Detroit MI:

Given this constraint and the success of Lafayette Park's layout in optimizing urban spaces, we have adopted a similar configuration. However, due to the unique layout of the Chrysler Building, our two-bedroom units will make up only 13%, compared to 27% at Lafayette Park.

	Lafayette Park		Chrysler Building	
	%	Room Size (sf)	%	Room Size (sf)
2-Bedrooms	27%	1,000	13%	1,300
1-Bedrooms	40%	850	63%	850
Studios	33%	650	24%	500

(Figure 2- Apartments Config in Our Chrslyer Building Reuse vs Lafayette Park)

(d.) Program

A Landmark Redevelopment in the Heart of Manhattan

The tower section will be redesigned to accommodate a sophisticated mixed-use purpose, integrating luxury residential condominiums with a five-star hotel. This blend of high-end living and premium hospitality offers an exceptional standard of urban living for both residents and hotel guests.

(d-1.) Crown (60th to 71st Floors):

The crown of the Chrysler Building will feature luxurious penthouses. This area includes two double-story penthouses and seven single-story penthouses, offering premium living spaces with unmatched views and the prestige of residing in the iconic uppermost levels of the building. These exclusive units will attract high-end buyers seeking an extraordinary living experience.

(d-2.) Tower (26th to 59th Floors):

The tower portion, from the 26th to the 59th floors, will consist of a mixed-use configuration of apartments and hotel rooms. The design of this section will differ from the base, with floor layouts optimized for the tower's narrower floorplates. This ensures a seamless transition between hotel guests and permanent residents, maintaining privacy while maximizing space utilization and view access.

(d-3.) Base (4th to 25th Floors):

The base of the building, spanning from the 4th to the 25th floors, will also include a mix of apartments and hotel rooms. This larger floorplate will allow for more flexible layouts, ensuring a balanced distribution between long-term residential units and hotel accommodations to meet the diverse needs of the building's occupants.

(d-4.) Street Level (Ground Floor):

At the ground floor, the building will house 5 retail shops. These retail spaces will activate the street frontage, providing services and amenities for both residents and visitors, while enhancing the urban vibrancy and engagement at street level. Crown (60th to 71st Floors):

Crown (60F~71F) :Penthouse

Tower (26F~59F) : Mix-Use
--Hotel + Luxury Apts

Base (4F~25F) : Mix-Use
--Hotel + Luxury Apts

Street Level (1F~2F) :Retail

(Figure 6- Program Diagram)

Why not Office?

The decision not to include office space in the Chrysler Building redevelopment also considers the building's architectural limitations. The design, characterized by small window surfaces and limited natural light in the building core, creates challenges for modern office layouts that prioritize open, well-lit workspaces. These factors make the building less appealing for tenants seeking contemporary, light-filled environments that enhance productivity. Instead, converting the space into luxury residential units and a 5-star hotel allows for more flexible design adaptations that can creatively overcome these constraints while catering to residents and guests who prioritize iconic architecture and prime location over conventional office needs.

(e.) GF Plan: Retail

(e-1.) Plan Configuration:

Our vision is to create a curated collection of high-end boutiques and flagship stores that complement the building's art deco grandeur. We're seeking brands that embody sophistication, innovation, and timeless style.

In the proposed retail conversion of the Chrysler Building's ground floor, the layout will preserve the building's architectural integrity while maximizing the commercial potential of the space.

- **Existing Spaces:** Three of the five retail spaces will stay mostly untouched, preserving their historical character and charm with minimal changes for tenant use.
- **Partitioned Space:** One larger space will be split into two storefronts, creating room for more tenants while maintaining design cohesion and flexibility.

Lexington Ave

(Figure 8-GF Plan)

(e-2.) Retail Tenant Selection:

For the retail spaces at the street level of the Chrysler Building, we have carefully curated a selection of five prestigious tenants whose brand identities align with the building's iconic Art Deco architectural style and luxurious image. These brands were chosen to enhance the building's historical and cultural significance while offering high-end, lifestyle-driven experiences.

Tenant 1 - %Arabica %

- Sector: Specialty Coffee
- Customer Profile: Discerning coffee enthusiasts, global travelers, design-conscious individuals.

Tenant 2 - Issey Miyake

- Sector: Fashion & Apparel
- Customer Profile: Fashion-forward individuals, art and design aficionados, urban professionals.

Tenant 3 - Gucci

- Sector: Luxury Fashion
- Customer Profile: High-net-worth individuals, luxury shoppers, fashionistas.

Tenant 4 - Ferrari

- Sector: Luxury Automotive
- Customer Profile: Affluent car enthusiasts, collectors, luxury lifestyle consumers.

Tenant 5 - Taschen

- Sector: Art & Publishing
- Customer Profile: Art collectors, design lovers, cultural consumers.

(Figure 7-GF Program Diagram)

(Figure 9- 4F Floor Plan)

(f.) 4F:Mixed-Use

(f.1.) Luxury Residential Condos:

The residential floors are planned to meet the demands of modern urban professionals. A selection of 1-bedroom and 2-bedroom condominiums is available, with layouts designed for 1-2 occupants. The corner units are particularly notable, featuring three-sided windows that allow abundant natural light and offer expansive views over Lexington Avenue and East 42nd Street. These units provide spacious living areas and open kitchens, tailored for high-income residents seeking both comfort and sophistication.

In addition, the building offers efficiently designed 1-beds and studio apartments, targeting younger professionals working in Manhattan. These units prioritize functional design and high-quality interiors, making them an ideal option for those looking for refined, central city living.

Residential Tenant Profile

- Name: Lihan Kao
- Position: Banking Associate ,Goldman Sachs
- Annual Income: 300k

Hotel Tenant Profile

- Name: Alejandra Castaño
- Position: Management Consultant
- Profile: A frequent traveler who prefers accommodations close to her workplace

(f-2.) Circulation Requirements

This section outlines the circulation requirements for building safety, focusing on the regulations for dead-end corridors and travel distance to exits.

Dead-End Corridors:

A dead-end corridor is a hallway or passageway within a building where there is only one direction of escape, with no access to an alternative exit at the far end. This can trap occupants in the event of an emergency, which is why the length of dead-end corridors is strictly regulated.

- Sprinklered buildings: Maximum allowable dead-end corridor length is 50 feet.

- Non-sprinklered buildings: Maximum allowable dead-end corridor length is 20 feet.

Travel Distance to Exits:

Travel distance to exits refers to the maximum permissible distance that an occupant must travel from the most remote point in a building to reach the nearest exit. This ensures that in an emergency, occupants can quickly and safely evacuate.

- Sprinklered buildings: Maximum allowable travel distance is 250 feet.

- Non-sprinklered buildings: Maximum allowable travel distance is 200 feet.

(Figure 10- 4F Circulation Diagram)

(f-3.) Room Types

The room types in the building will include studios (Type :S-3) and one-bedroom units, some of which will open to the atrium to maximize natural lighting. This design feature not only enhances the sense of openness but also ensures that interior units receive ample daylight, improving the overall living experience for residents..

(Figure 11- 4F Room Types)

(Figure 12- 25F Floor Plan)

(g.) 25F:Mixed-Use

(a.) Premium Hotel Suites:

Adjacent to the residential floors, the hotel offers an exclusive experience with beautifully designed guest rooms and suites, with XXX keys per floor. These accommodations provide views of the nearby 6 Grand Central and deliver an exceptional stay for global business travelers. The hotel emphasizes superior service and the highest levels of comfort.

Both the residential and hospitality components of the building are designed to offer flexible, contemporary living spaces, catering to Manhattan's business travelers and residents alike. Modern amenities and adaptable layouts make it ideal for both long-term residents and short-term guests. With spacious units, high-end finishes, and a prime location in the heart of Manhattan, the building offers easy access to business, shopping, dining, and entertainment, providing a luxurious yet practical living experience. The design ensures each space meets the needs of today's urban professionals, blending architectural elegance with functionality.

(Figure 13- 25F Room Types)

(Figure 14- 70F Penthouse -upper)

Single-Floor Penthouse:

- 360° city skyline views
- Spacious living and dining area for entertaining
- Modern kitchen with premium appliances
- Master suite with a spa-like bathroom
- Guest bedrooms and bathrooms
- Private elevator entrance for exclusivity

Double-Floor Penthouse:

- Staircase connecting both levels
- Double-height ceilings for added grandeur
- Upper-level master retreat with a private terrace
- Lower-level entertainment area with a bar and media room
- Guest suites and a home office

(Figure 15- 70F Penthouse -lower)

(Figure 16- 67F Room Types)

(h.) Penthouse:

(h-1.) Crown Penthouse:

The penthouses in the building come in two distinct types: single-story and double-story layouts. The single-story penthouses offer expansive, open-plan living spaces with premium finishes and breathtaking views. In addition, there are two exclusive double-story penthouses, designed with soaring ceilings and extra space to create a grander, more luxurious living experience, perfect for those seeking both style and privacy at the highest level.

Penthouse Tenant Profile

- **Tenant Profile:** Meryl Streep
- **Income Profile:** High-net-worth individual with significant earnings from a successful career in the entertainment industry. Likely to have substantial assets and investments, affording a luxurious lifestyle.

(i.) Future Outlook:

The adaptive reuse of the Chrysler Building will have a profound and wide-ranging impact on both the building itself and the broader Midtown Manhattan area.

(i-1.)Economic Boost and Real Estate Value: Converting the Chrysler Building into luxury residential units and a 5-star hotel is expected to significantly raise real estate values in Midtown Manhattan. As one of New York City's most iconic landmarks, its transformation into high-end mixed-use spaces will attract wealthy individuals, international business travelers, and investors, creating a ripple effect that boosts surrounding property prices. This revitalization could lead to increased demand for upscale housing, hospitality, and commercial services, ultimately encouraging further investment in the area and solidifying Midtown as a prime location for luxury real estate.

(i-2.)Cultural and Architectural Preservation: The project successfully balances modernization with the preservation of the Chrysler Building's historic Art Deco aesthetic. By maintaining its iconic architectural features while repurposing its interior, the project safeguards one of New York's most cherished cultural landmarks. This preservation effort ensures that the building remains relevant in a contemporary context while honoring its historical significance, thereby protecting the city's architectural heritage. The careful redesign will breathe new life into the building, allowing it to continue as a cultural symbol for generations to come..

(i-3.)Community Impact and Demographic Shifts: The building's conversion will likely cater to an affluent, younger demographic, particularly professionals in industries such as finance, consulting, and technology. This shift in the tenant base could influence the local community by driving more high-income individuals to the area, reshaping the neighborhood's socioeconomic fabric. As Midtown Manhattan continues to evolve from a primarily commercial hub into a residential and social center, local businesses and services may adapt to cater to this wealthier, professional demographic, contributing to further changes in the district's character and lifestyle.

(i-4.)Urban Revitalization and Sustainability: The adaptive reuse of the Chrysler Building sets a positive precedent for urban revitalization by showing how aging architectural landmarks can be repurposed into functional, modern spaces. This project demonstrates the potential for historic buildings to be preserved and revitalized rather than replaced, aligning with sustainable urban development practices. By transforming an existing structure rather than constructing new developments, the project reduces the environmental impact associated with new construction while enhancing the urban landscape, potentially inspiring similar adaptive reuse projects across the city and beyond.
